

00580900 & 00581700 CONNECTORS

7-Pole Aluminium Body Sockets • 24V • ISO 1185 • ISO 3731

Description

The system consists of a N (Normal) version according to ISO 1185, generally used for standard applications, and a S (Supplementary) version according to ISO 3731 used for additional connections. The latter can be distinguished by its white coloring and by the different order of the contacts, preventing an incorrect connection to the N version. The series of sockets includes special models with 16 rear spade contacts (5 double and 2 triple) in order to split the electrical system of the trailer, avoiding the use of junction boxes. Littelfuse supplies these connectors both with plastic or aluminium body and some versions are varnished with black anti-oxidating coating.

Features and Benefits

- Standards: Conforms to ISO 1185 & ISO 3731 recommendations and standards.
- Accepts all 7-pole plugs that conform to ISO 1185 & ISO 3731.
