

## Landungsbrücke

The "Landungsbrücke" is the connection between your desktop computer and Trinamic's Chip solutions. Just connect the desired board combination and start to discover Trinamic's unique features.

The heart of the Landungsbrücke is a Freescale MK20 cortex M4 processor. A single firmware design covers all evaluation boards of the Trinamic evaluation system. Users can download the latest revisions, modify the firmware or create your own and easily update it via USB. The code is open source for download.
